

Build a 4-Tab Fitness Tracker Shell (Expo Router Tabs Template)

Activity Overview

In this activity, you will create a simple Fitness Tracker app using the **Expo Router Tabs template**. The app will contain:

- Today (Home) tab
 - Workouts tab
 - Stats tab
 - Profile tab
 - Hidden Settings screen
 - Navy and amber theme
 - Badge on the Today tab
-

Step 1: Create a New Expo Tabs Project

Open a terminal and run:

```
npx create-expo-app fitness-tracker -t tabs
```

Navigate to the project: `cd fitness-tracker`

Start the development server: `npx expo start`

Step 2: Examine the Project Structure

The Tabs template already creates:

```
app
├── (tabs)
│   ├── _layout.tsx
│   ├── index.tsx
│   └── explore.tsx
└── _layout.tsx
```

`two.tsx` could appear instead of `explore.tsx`. We will replace the starter screens with our own files.

Step 3: Create the Tab Screens

Create the following files:

```
app
├── (tabs)
│   ├── _layout.tsx
│   ├── index.tsx
│   ├── workouts.tsx
│   ├── stats.tsx
│   └── profile.tsx
└── settings.tsx
```

Step 4: Create Home Screen

File: app/(tabs)/index.tsx

```
import { View, Text, StyleSheet } from "react-native";

export default function HomeScreen() {
  return (
    <View style={styles.container}>
      <Text style={styles.title}>Today's Activity</Text>
      <Text>Workout sessions: 3</Text>
    </View>
  );
}

const styles = StyleSheet.create({
  container: {
    flex: 1,
    justifyContent: "center",
    alignItems: "center",
  },
});
```

```
title: {  
  fontSize: 24,  
  fontWeight: "bold",  
  marginBottom: 10,  
},  
});
```

Step 5: Create Workouts Screen

File: app/(tabs)/workouts.tsx

```
import { View, Text, StyleSheet } from "react-native";  
  
export default function WorkoutsScreen() {  
  return (  
    <View style={styles.container}>  
      <Text style={styles.title}>Workouts</Text>  
      <Text>Workout Library</Text>  
    </View>  
  );  
}  
  
const styles = StyleSheet.create({  
  container: {  
    flex: 1,  
    justifyContent: "center",  
    alignItems: "center",  
  },  
  title: {  
    fontSize: 24,  
    fontWeight: "bold",
```

```
},  
});
```

Step 6: Create Stats Screen

File: app/(tabs)/stats.tsx

```
import { View, Text, StyleSheet } from "react-native";  
  
export default function StatsScreen() {  
  return (  
    <View style={styles.container}>  
      <Text style={styles.title}>Statistics</Text>  
      <Text>Weekly fitness summary</Text>  
    </View>  
  );  
}  
  
const styles = StyleSheet.create({  
  container: {  
    flex: 1,  
    justifyContent: "center",  
    alignItems: "center",  
  },  
  title: {  
    fontSize: 24,  
    fontWeight: "bold",  
  },  
});
```

Step 7: Create Profile Screen

File: app/(tabs)/profile.tsx

Code

```
import { View, Text, StyleSheet } from "react-native";

export default function ProfileScreen() {

  return (

    <View style={styles.container}>

      <Text style={styles.title}>Profile</Text>

      <Text>Fitness user profile</Text>

    </View>

  );

}

const styles = StyleSheet.create({

  container: {

    flex: 1,

    justifyContent: "center",

    alignItems: "center",

  },

  title: {

    fontSize: 24,

    fontWeight: "bold",

  },

});
```

Step 8: Configure the Tabs

File: app/(tabs)/_layout.tsx

Code

```
import { Tabs } from "expo-router";

import Ionicons from "@expo/vector-icons/Ionicons";
```

```
export default function TabLayout() {
  return (
    <Tabs
      screenOptions={{
        tabBarActiveTintColor: "#FFC107",
        tabBarInactiveTintColor: "#A0A0A0",
        tabBarStyle: {
          backgroundColor: "#0A2342",
        },
        headerStyle: {
          backgroundColor: "#0A2342",
        },
        headerTintColor: "#FFFFFF",
      }}
    >
      <Tabs.Screen
        name="index"
        options={{
          title: "Today",
          tabBarBadge: 3,
          tabBarIcon: ({ color, focused }) => (
            <Ionicons
              name={focused ? "home" : "home-outline"}
              size={24}
              color={color}
            />
          )
        }}
      />
    </Tabs>
  )
}
```

```
),  
  }  
/  
  
<Tabs.Screen  
  name="workouts"  
  options={{  
    title: "Workouts",  
    tabBarIcon: ({ color, focused }) => (  
      <Ionicons  
        name={focused ? "barbell" : "barbell-outline"}  
        size={24}  
        color={color}  
      />  
    ),  
  }}  
/  
  
<Tabs.Screen  
  name="stats"  
  options={{  
    title: "Stats",  
    tabBarIcon: ({ color, focused }) => (  
      <Ionicons  
        name={focused ? "stats-chart" : "stats-chart-outline"}  
        size={24}  
        color={color}  
      />  
    )  
  }  
/
```

```

    },
  }}
/>

<Tabs.Screen
  name="profile"
  options={{
    title: "Profile",
    tabBarIcon: ({ color, focused }) => (
      <Ionicons
        name={focused ? "person" : "person-outline"}
        size={24}
        color={color}
      />
    ),
  }}
/>

</Tabs>

);
}

```

Step 9: Create the Hidden Settings Screen

File: app/settings.tsx

Code

```

import { View, Text, StyleSheet } from "react-native";

export default function SettingsScreen() {
  return (
    <View style={styles.container}>

```

```

<Text style={styles.title}>Settings</Text>

<Text>App preferences and configuration</Text>

</View>

);

}

const styles = StyleSheet.create({

  container: {

    flex: 1,

    justifyContent: "center",

    alignItems: "center",

  },

  title: {

    fontSize: 24,

    fontWeight: "bold",

  },

});

```

Step 10: Hide Settings from the Tab Bar

Even though the screen exists, it should not appear in the tab bar.

File: app/_layout.tsx

Replace with

```

import { Stack } from "expo-router";

export default function RootLayout() {

  return (

    <Stack>

      <Stack.Screen

        name="(tabs)"

```

```

options={{ headerShown: false }}
/>

<Stack.Screen
name="settings"
options={{
title: "Settings",
}}
/>

</Stack>

);
}

```

Because settings.tsx is outside the (tabs) folder, it is automatically hidden from the tab bar.

Step 11: Navigate to Settings

Add a button to the profile screen.

File: app/(tabs)/profile.tsx

Updated Code

```

import { View, Text, Button, StyleSheet } from "react-native";
import { router } from "expo-router";

export default function ProfileScreen() {
  return (
    <View style={styles.container}>
      <Text style={styles.title}>Profile</Text>
      <Button
        title="Open Settings"
        onPress={() => router.push("/settings")}
      />
    </View>
  );
}

```

```
    />

  </View>

);
}

const styles = StyleSheet.create({
  container: {
    flex: 1,
    justifyContent: "center",
    alignItems: "center",
  },
  title: {
    fontSize: 24,
    fontWeight: "bold",
    marginBottom: 20,
  },
});
```

Step 12: Test the App

Run: `npx expo start`

Verify:

- Four tabs appear
- Today tab shows badge "3"
- Navy background
- Amber active icons
- Focused icons are filled
- Unfocused icons are outlined
- Profile button opens Settings
- Settings is not visible in the tab bar
- App runs without errors

Final Folder Structure

```
app
├── _layout.tsx
├── settings.tsx
└── (tabs)
    ├── _layout.tsx
    ├── index.tsx
    ├── workouts.tsx
    ├── stats.tsx
    └── profile.tsx
```

Note: You could create a styling file in constants folder to reduce styling redundancy.

Deliverable

A Fitness Tracker app that:

- Uses Expo Router Tabs
- Has 4 working tabs
- Uses Ionicons
- Uses a navy and amber color theme
- Displays a badge on the Today tab
- Includes a hidden Settings screen
- Runs successfully in Expo Go without errors
