

Course Settings Screen Activity Guide

What You Are Building

- Two Profile TextInputs (Name and Email)
- Four Notification toggles
- Dark Mode and Compact View toggles
- Reusable SettingsRow component
- Save button with a temporary confirmation message

Required File Structure

- app/(tabs)/settings.tsx
- components/SettingsRow.tsx
- constants/settingsStyles.ts

Step 1 - Create SettingsRow.tsx

- Create interface SettingsRowProps.
- Add label, optional description, Switch and callback.
- Use controlled Switch pattern.

Step 2 - Create settings.tsx

- Create state for name and email.
- Create state for four notification switches.
- Create state for Dark Mode and Compact View.

Step 3 - Build Profile Section

- Add controlled Name TextInput.
- Add controlled Email TextInput.

Step 4 - Build Notifications Section

- Reuse SettingsRow for Course Updates.
- Reuse SettingsRow for Assignment Alerts.
- Reuse SettingsRow for Discussion Replies.
- Reuse SettingsRow for Announcements.

Step 5 - Build Display Section

- Reuse SettingsRow for Dark Mode.
- Reuse SettingsRow for Compact View.

Step 6 - Create Save Logic

- `const [saved, setSaved] = useState(false);`
- Show confirmation message when Save is pressed.
- Hide confirmation using `setTimeout(() => setSaved(false), 2000)`.

Step 7 - Add Pressable Save Button

- Use Pressable instead of Button.
- Add pressed state styling.
- Display ✓ Settings saved! message.

Step 8 - Create settingsStyles.ts

- Move all styling into StyleSheet.
- Use zero inline styles.
- Share styles across components.

Testing Checklist

- All inputs are controlled.
- All switches work independently.
- Save message appears and disappears after 2 seconds.
- SettingsRow reused multiple times.
- No inline styles exist.
