

Styling the Movie Detail Screen - From Bare to Beautiful

Activity Goal

- Understand StyleSheet objects
- Work with shadows and elevation
- Apply a new color palette
- Use Platform.select()
- Create a poster overlay using rgba()
- Compare Android and iOS rendering

Step 1 - Run the Starter App

- Open app/(tabs)/index.tsx
- Run `npx expo start`
- Identify poster, title, year, badges and description

Step 2 - Identify Styles

- Review screen, content, poster, info, title, year, genreRow, badge, badgeText and description styles.

Step 3 - Add Poster Shadow

- Add `shadowColor`, `shadowOffset`, `shadowOpacity` and `shadowRadius` for iOS.
- Add `elevation` for Android.

Step 4 - Change the Color Palette

- Switch to a dark movie-theme palette.
- Update screen, title, year, badge and description colors.

Step 5 - Platform Specific Styling

- Import Platform from react-native.
- Use Platform.select() to set different top padding values.

Step 6 - Add Poster Overlay

- Wrap Image inside posterContainer.
- Add overlay style using `rgba(0,0,0,0.25)`.

Step 7 - Create an Info Card

- Add backgroundColor, padding and borderRadius to the info container.

Step 8 - Test on Android and iOS

- Compare shadows, padding and overall appearance.

Reflection Questions

- Which style property creates rounded corners?
- Why is elevation needed on Android?
- What does the alpha value in rgba() represent?
